PCT/SE2004/000904

CLAIMS

5

10

- 1. Device for abrading a wall of stone or concrete material, which comprises:
 a shell (2) with which is operationally connected an abrading head (1), and a
 carriage (8) intended for moving at least along the surface and supporting the
 shell (2) moveably so that the abrading head (1) by the movement of the shell
 (2) performs an upward and downward abrading movement, characterised in
 that the abrading head (1) is of the type which has a rotatably mounted and
 driven planet wheel with a number of driven abrading discs rotatably
 mounted thereon and fitted with abrading elements, and an element for
 placing the abrading head (1) with a predeterminable force against the surface
 to be abraded.
- 2. Device according to claim 1, characterised in that said element for placing the abrading head (1) comprises at least one gas spring (6) or at least one hydraulic cylinder/piston device.
 - 3. Device according to claim 1 or 2, characterised in that the operational connection comprises a universal mounting (4) of the abrading head (1) with a counterweight (5) balancing this.
 - 4. Device according to any of the previous claims, characterised in that the carriage is a forklift truck (8) and the shell (2) is intended to be mounted on the forks (8a) of the truck (8).
